SUMMARY

Full Stack Developer specializing in AI-powered systems and LLM integrations. Experienced in building distributed, production-grade applications with real-time architecture using Next.js, Node.js, FastAPI, Redis, BullMQ, WebSockets, and vector databases. Passionate about developing agentic AI workflows, RAG pipelines, and MCP-compatible tooling for real-world use cases.

EXPERIENCE

AI Systems Engineer

Aug 2024 – Present

AetherOS – Independent Project | [GitHub](#)

Remote

- Developing a local-first second brain application enabling persistent memory across multiple LLMs (Claude, ChatGPT) without context re-entry – solving the cross-LLM knowledge fragmentation problem.
- Architected hybrid RAG retrieval system using sparse + dense vector search (Qdrant) with RRF reranking for high-precision recall over personal knowledge bases.
- Implemented dual deployment model: local GPU inference via HuggingFace for privacy-sensitive data, cloud fallback for speed – with fully isolated databases per deployment.
- Designed MCP-compatible interface layer, enabling future integration with Claude and ChatGPT as a persistent skill/tool across LLM platforms.
- Built dual-chunking pipeline with hierarchical metadata and section-aware document ingestion optimized for Markdown files.

Full Stack AI Developer

Jan 2024 – Present

Resume Analyzer – Independent Project | [GitHub](#)

Remote

- Built a distributed resume analysis platform using Next.js, Express, BullMQ, Redis, Socket.io, MongoDB, and GPT-4o – featuring a 6-stage AI evaluation pipeline against job descriptions.
- Diagnosed and resolved Vercel serverless timeout constraint (10–15s limit) by redesigning to async job queue architecture with Redis/BullMQ, returning immediate acknowledgment and delivering results via WebSocket.
- Implemented two-layer socket security: Clerk JWT token verification on connection + job ownership matching per room, preventing unauthorized result access.
- Engineered section-aware resume parsing using `detectedHeaderRawText` for source fidelity across varied resume formats.
- Integrated Qdrant vector search and HuggingFace embeddings for semantic similarity scoring between resume content and job description.

Full Stack Developer

Jun 2023 – Dec 2023

Block CMS Platform – Independent Project | [GitHub](#)

Remote

- Designed and built a full-stack CMS with block-based editor, authenticated user dashboards, and complete CRUD functionality using the MERN stack.
- Implemented secure role-based authentication and modular content architecture for flexible, reusable block structures.

EDUCATION

Netaji Subhas Engineering College

Kolkata, WB

B.Tech in Information Technology

2022 – 2026

– CGPA: 7.1

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python

Frontend: Next.js, React.js, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, REST APIs, WebSockets

AI & LLMs: OpenAI GPT-4o, LangChain, LangGraph, HuggingFace, Prompt Engineering, RAG, Agentic Workflows, MCP

Databases & Infrastructure: MongoDB, Redis, BullMQ, Qdrant (Vector DB), SQL

Tools & Platforms: Git, GitHub, Vercel, Clerk, n8n, Socket.io

CS Fundamentals: Data Structures & Algorithms, DBMS, OOP, MVC Architecture

CERTIFICATIONS

Generative AI Mastermind <i>Outskill</i>	2024
– Mastered AI tool building, LLM-based automation workflows, and agentic system design.	
Generative AI Fundamentals <i>LinkedIn Learning</i>	2024
– Covered foundations of generative models, prompt engineering, and production AI application patterns.	
SQL & Relational Databases <i>IBM</i>	2023
– Advanced SQL – joins, indexing, query optimization, and relational database design.	

CODING PROFILES

GeeksforGeeks: 100+ problems solved (DSA – Arrays, Trees, Graphs, DP)
